Message from the Guest Editors

Dear Colleagues,

During recent decades, the ongoing exploitation of coastal areas, along with the problems related to coastal erosion, water quality, land use, and soil transformation, highlighted the issues of coastal vulnerability. Therefore, the assessment of possible impacts of current and future climate change scenarios and the definition of new technical solutions and strategies for future planning in coastal environments are crucial issues that must be addressed by the scientific community. A great amount of research has been conducted, but there remains extensive work that must be carried out to find sustainable and feasible solutions to these issues, while understanding the genesis of some natural or human-induced phenomena.

This Special Issue intends to collect original works and reviews that aim to illustrate innovative and sustainable strategies. Due to the interdisciplinarity of the topic, research from different areas characterized by a holistic approach (e.g., the socio-economic impact on coastal areas) is most welcome.

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)
