Message from the Guest Editors

Dear Colleagues,

The coastal ocean, the area extending from estuarine mouths and surf zones to the continental slope, is the interface between fresh waters and salt waters and the domain where the coastal waters meet the open ocean fluxes.

This domain, complex in both space and time, is under continuous anthropogenic and physical pressures, as many Sustainable Development Goals (SDGs) address the environmental and socio-economic challenges facing the coastal ocean on a global scale.

Climate change, sea level rise and related extremes are affecting not only the physical processes taking place in coastal waters, but also the population and environmental resilience of coastal regions.

Therefore, more comprehensive knowledge on the best ways to monitor, describe, understand and predict the physical processes of the coastal ocean is urgently needed, especially for long-term climate change predictions.

This Special Issue will collect and present recent research detailing monitoring and modeling efforts for various physical processes in the coastal ocean.

Prof. Dr. Yannis N. Krestenitis

Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering* (JMSE; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Engineering, Marine) / CiteScore - Q2 (*Civil and Structural Engineering*)
