submissions:

**closed (31 December 2022)**

### Message from the Guest Editor

While often embraced conceptually, implementation of ecosystem-based fishery management lacks consensus. In the eastern Bering Sea, EBFM is explicitly incorporated into management plans for the pollock fishery, the largest by volume in the United States. Although careful management has maintained a stable pollock population, increasing evidence suggests that this may have been in part at the expense of the northern fur seal population, which has been in continuous decline since the inception of the industrial-scale commercial pollock fishery in 1964. Recognizing these developments, I invite you to contribute a manuscript to a Special Issue of the *Journal of Marine Science and Engineering* that will focus on the scientific, traditional ecological knowledge and fishery management perspectives on evidence in support of or countering possible competition for pollock between the commercial fishery and northern fur seals, as well as the case for and potential socio-economic consequences of alternative management options.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering* (JMSE; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Engineering, Marine) / CiteScore - Q2 (*Civil and Structural Engineering*)
