submissions:

**closed (31 December 2022)**

### Message from the Guest Editor

While often embraced conceptually, implementation of ecosystem-based fishery management lacks consensus. In the eastern Bering Sea, EBFM is explicitly incorporated into management plans for the pollock fishery, the largest by volume in the United States. Although careful management has maintained a stable pollock population, increasing evidence suggests that this may have been in part at the expense of the northern fur seal population, which has been in continuous decline since the inception of the industrial-scale commercial pollock fishery in 1964. Recognizing these developments, I invite you to contribute a manuscript to a Special Issue of the *Journal of Marine Science and Engineering* that will focus on the scientific, traditional ecological knowledge and fishery management perspectives on evidence in support of or countering possible competition for pollock between the commercial fishery and northern fur seals, as well as the case for and potential socio-economic consequences of alternative management options.

## Message from the Editor-in-Chief

*Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312)* focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)
