Message from the Guest Editors

Marine ecosystems experience constant anthropogenic stress through eutrophication, acidification, warming, and pollution (e.g., plastics, oil spills). Microbial communities act as sentinels for environmental changes. However, microbial responses to environmental changes often remain unpredictable as microbes operate on the microscale, which complicates extrapolation of microbial structure and function to larger scale processes. For instance, millimeter-sized organic aggregates known as marine snow harbor distinct microbial communities compared to ambient waters, making them hotspots for microbially mediated elemental cycling. New observations and experiments, together with analytical advances, may allow us to gain detailed insights into how microorganisms (free-living or particle-attached) respond to stressors, thus contributing to predictions of future scenarios and guiding decision makers. We welcome submissions of laboratory and field studies on microbial responses to natural and anthropogenic changes, and on spatial scales ranging from ocean basins to microenvironments such as marine snow.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)
