Message from the Guest Editors

The marine environment covers 71% of the Earth's surface and is an essential life-supporting component. It is characterised by increased diversity and plasticity and offers a range of essential goods and services to human populations. Unfortunately, the intensified anthropogenic pressures may pose significant risks to marine habitats and organisms and threaten their equilibrium, mainly in highly urbanized estuaries and coastal areas. Existing European Union policies aim to support sustainable marine spatial planning processes and enhance relevant environmental assessments focusing on the ecology of marine organisms.

The research topics that this Special Issue will cover include marine environmental risks such as:

- climate change and ocean acidification;
- establishment of invasive non-indigenous species;
- pollution;
- habitat fragmentation and biodiversity loss; and
- overfishing and overexploitation.

Risk impacts and their relevant scales will be investigated, and management strategies and nature-based solutions (NBSs) will be proposed and evaluated.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering* (JMSE; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Engineering, Marine) / CiteScore - Q2 (*Civil and Structural Engineering*)
