Message from the Guest Editor

Dear Colleagues,

The world's coastal zones are under enormous pressure due to the pressures from a multitude of human activities such as tourism, transportation, mining/aggregate abstraction, lagoon and river delta exploitation, urban sprawl, ports/harbours, fisheries, aquaculture, heavy industry, agriculture, and recreation, which all compete for space and natural resources. Integrated coastal-zone management is a multi-field science that aims to construct integrated management plans that include many different activities, establish a system for conflict resolution between activities to minimise their negative economic effects through trade-offs, support and maintain the ecosystem services of coastal areas, and introduce sustainability in the exploitation of space and natural resources. Integrated coastal management aims to improve the economic benefits from the exploitation of coastal zones through the minimisation of the environmental footprint of the activities and the support and improvement of social welfare through the security of jobs and income.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering* (JMSE; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Engineering, Marine) / CiteScore - Q2 (*Civil and Structural Engineering*)
