Deadline for manuscript submissions:

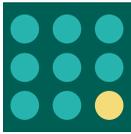

20 October 2026

Message from the Guest Editors

This special issue focused on techniques for early detection of genetic disorders, fetal risk assessment, and fetal health monitoring. In addition, we are interested in research on personalized endocrine therapies in gynecological health, including the latest approaches for diagnosing and managing uterine fibroids and endometriosis.

Furthermore, we are open to exploring metagenomics and epigenetics, with an emphasis on how the microbiome and epigenetic changes affect treatment options and pregnancy outcomes. Pharmacogenomics, which adjusts drug regimens to genetic profiles for better efficacy and safety. Through genetic testing for evaluation and prevention and personalized fertility treatments.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
