Message from the Guest Editors

Dear Colleagues,

Cardiovascular imaging is a central aspect of personalized medicine, empowering healthcare providers with detailed information about a patient's heart structure, function, and blood flow. This deep knowledge enables healthcare professionals to make informed and personalized treatment decisions, leading to better patient outcomes and improved overall healthcare. This Special Issue of the *Journal of Personalized Medicine* aims to highlight state-of-the-art cardiovascular imaging in the areas of diagnosis and risk stratification, tailored treatment plans, monitoring disease progression, minimally invasive interventions, predictive modeling and AI, research and innovation, and patient education and involvement. Progress in personalized medicine in the cardiovascular field heavily relies on advances in diagnostic methods; therefore, it is crucial to stimulate basic and clinical research.

Dr. Vincenzo Zaccone

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
