Message from the Guest Editors

Endometriosis is a chronic inflammatory disease that leads to pain and infertility, and occurs primarily in women of reproductive age. Endometriosis has a significant impact on women's health and health care costs. Endometriosis affects 6–10% of reproductive-aged women and more than 175 million women worldwide. Most women with endometriosis suffer physically and emotionally in their day-to-day function. Despite current research efforts, diagnosis and treatment options remain lacking. The number of surgeries performed for endometriosis worldwide is ever increasing; thus, measuring the magnitude of the effect of surgery is of the utmost importance in order to define a therapeutic balance between benefits, harms and costs in various clinical conditions. We aim to present a selection of papers in this Special Issue that will focus on the optimum diagnostic techniques employed to treat this disease, as well as novel therapeutic approaches. We welcome you to submit original papers, reviews, and perspectives on the challenges present and information available with regard to cutting-edge endometriosis diagnosis and treatment.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
