Message from the Guest Editors

This Special Issue is dedicated to the latest advancements in the surgical management of orthopedic trauma, including upper-limb injuries. As the field of orthopedic surgery continuously evolves, innovative surgical techniques and treatment modalities have been developed to enhance patient outcomes and recovery. This Special Issue aims to gather high-quality studies, including original research and reviews, exploring various surgical approaches to treating orthopedic trauma. We seek to cover a broad spectrum of topics, ranging from fracture fixation methods to soft-tissue repair, and address the potential complications associated with these treatments. Our goal is to provide a comprehensive resource that not only enriches the existing literature but also promotes the dissemination and exchange of knowledge within the scientific community. By doing so, we hope to advance the field of orthopedic trauma and improve clinical practices globally.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
