Message from the Guest Editors

Gastrointestinal (GI) cancers encompass malignancies that can affect several organs of the digestive tract: the pancreas, stomach, liver, small and large intestines, colon, rectum, anus, and the biliary system. Notably, colorectal cancer and gastric cancer are the third and fifth most frequent types of cancer, respectively and are amongst the fifth most common causes of cancer-related death worldwide. The treatment options for GI cancers depend on the tumor type and stage, and may include surgery, radiation therapy, chemotherapy, targeted therapy, and immunotherapy. In particular, recently, there have been notable advancements in the development of innovative treatments for GI cancers, such as targeted therapy and immunotherapy.

The main objective of this Special Issue is to provide a comprehensive overview of the current advancements in diagnostic and therapeutic strategies, and a better prognostic stratification for GI cancers with the goal of advancing knowledge and improving patient outcomes.

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
