Message from the Guest Editor

Dear Colleagues,

Interventional radiology has revolutionized the field of medicine by offering minimally invasive alternatives to conventional treatments. Over the years, remarkable progress has been made in interventional techniques, allowing for precise and targeted interventions across a wide range of medical conditions. From vascular interventions to percutaneous procedures, interventional radiology has opened up new frontiers in personalized therapy.

One key area of focus for this Special Issue is interventional radiology in oncology. Furthermore, we seek articles that explore the integration of imaging modalities, artificial intelligence, and data-driven approaches in interventional radiology.

We invite all researchers and clinicians working in the field of interventional radiology to submit their valuable original research articles and reviews for this Special Issue. Together, let us advance the frontiers of interventional radiology and drive the paradigm shift towards personalized medicine.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
