Message from the Guest Editor

Dear Colleagues,

Parkinson's disease is the second most common neurodegenerative disease in the world and affects millions of people globally. Much is left to discover about this disease. There is no resolutive treatment; the cause is unknown; diagnostic tools are scanty; and, so far, it remains essentially a clinical diagnosis.

However, in the recent decades several treatments have been available that alleviate signs and symptoms. Pathogenesis as well as some genetic aspects have been partially clarified and linked to clinical pictures. Magnetic Resonance is being used to study brain modification related to the disease. Other diagnostic tools are being developed, and we are about to reach the goal of personalized medicine applied to Parkinson's disease.

We need to assess our current position in order to move forward.

Message from the Editor-in-Chief

Journal of Personalized Medicine (*JPM*; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.
Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
