### Message from the Guest Editor

Biliopancreatic endoscopy has undergone important changes and expansion over the last two decades. Not only are technologies around ERCP expanding, but also the different subtypes of procedures and indications are becoming more widespread, and subsequently, the number of professionals performing these techniques and coming from different specialties is increasing. The aim of this issue is to provide a comprehensive overview of all available multidisciplinary techniques that are involved in the treatment of biliopancreatic diseases. The advent of excellent imaging, better visualization, and excellent software makes the approach to biliopancreatic diseases by definition multidisciplinary. Team collaboration is essential for this highly dynamic environment. High definition cholangioscopy, 3D imaging of the biliopancreatic system, radiofrequency ablation, and endomicroscopy are some of the cutting-edge procedures that will be approached. Original research articles, cutting-edge procedures, literature reviews, and metaanalyses are welcome.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, PMC, Embase, and other databases.

**Journal Rank:** CiteScore - Q1 (Medicine (miscellaneous))
