Deadline for manuscript submissions:
**closed (30 May 2022)**

Message from the Guest Editor

Dear Colleagues,

In recent years, we have observed an explosion in the volume and complexity of biomedical and clinical data through significant advances in high-throughput omics measurement methods and medical imaging technologies. New methods should simplify the process of dealing with the technical artifacts and biological complexity that underlie human diseases. However, the ultimate goal is to develop bioinformatic solutions that are able to translate biological knowledge into clinical practice.

This Special Issue of the Journal of Personalized Medicine aims to highlight the current state of the bioinformatic approaches that were successfully applied in precision medicine and introduce some of the latest findings in the area. All studies are welcome that describe bioinformatic methods to integrate, analyze, and interpret omics, clinical or medical imaging data for a better understanding of biological mechanisms of disease and translation of the findings into personalized

Special Issue

Message from the Editor-in-Chief

Journal of Personalized Medicine (*JPM*; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.
Journal Rank: JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
