Message from the Guest Editor

The coronavirus, SARS-CoV-2 is pathogenic to humans and may be associated to severe acute respiratory syndrome, SARS. Its presence may be asymptomatic or in the coronavirus disease 2019 (COVID-19), symptoms may range from mild to severe.

SARS-CoV-2 may also be associated with non-respiratory clinical features. The *Journal of Personalized Medicine* is now opening a Special Issue that is fully dedicated to the related complications such as immune perturbation/cytokine storm, Kawasaki disease-like form, viral coagulopathy, pulmonary embolism, stroke-neurological, multiorgan failure and impact of SARS-CoV-2 genomic variability on symptoms.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
