Message from the Guest Editor

The WHO has listed chronic obstructive pulmonary disease (COPD), asthma, occupational lung diseases, and pulmonary hypertension as the most common chronic respiratory diseases which also include obstructive sleep apnea and interstitial lung disease. Chronic respiratory diseases and their burden are threatening the sustainability of the healthcare system, so improving their management could be considered a strategic point.

We are soliciting in-depth commentary, original research (including communications), and review articles with a focus on new developments and important advances in the diagnosis, treatments, and research of chronic respiratory diseases.

an Open Access Journal by MDPI
