Message from the Guest Editor

Dear Colleagues,

Endometriosis is a complex, chronic gynaecological disorder that mostly affects women of reproductive age, with an estimated prevalence of approximately 10% among this population. However, this proportion seems to vary significantly due to the insufficiency of preoperative diagnostic tools and the fact that a significant majority of women with endometriosis are asymptomatic. The optimal treatment should be tailored according to patient and disease characteristics including age, preferences, symptoms and extent of the disease, as well as previous therapeutic interventions. Unfortunately, a significant proportion of women will present with recurrent disease irrespective of the previous treatment modality. Therefore, it is of critical importance to expand our knowledge on the novel diagnostic modalities and new therapeutic approaches for the disease. In this Special Issue, we invite original articles, reviews and perspectives addressing new insights, challenges and available knowledge on the diagnosis and treatment of endometriosis.

Journal of Personalized Medicine (*JPM*; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.
Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
