Message from the Guest Editor

Dear Colleagues,

Precision medicine is reshaping the paradigm of cancer treatment, and the management of gastric cancer has also recently moved toward a tailored therapeutic approach.

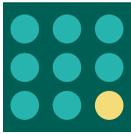

This Special Issue aims to highlight the most recent acquisitions around the molecular and cellular biology of gastric cancer, and it focuses on the most compelling advances in tailoring of systemic therapies in patients affected by this disease. The growing knowledge about the genomic landscape of gastric cancer has paved the way for the development of novel targeted drugs and the identification of relevant predictive factors.

Beyond the introduction of anti-HER2 agents more than ten years ago and, more recently, anti-VEGF drugs, the most promising targets include claudin 18.2 and FGFR, but many trials are ongoing.

Articles investigating genetic and epigenetic drivers or other significantly altered pathways, as well as preclinical or clinical studies focused on the molecular profiling, are welcome.

Dr. Valeria Merz

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
