Dear Colleagues,

Advances in genomic technologies have led to innovation in healthcare and medicine, improving patient outcomes. The concept of precision medicine is gaining momentum. A key aspect of delivering comprehensive, timely and equitable precision medicine lies in optimizing the delivery of health services, including genetic counseling and genetic testing. Improvements in genetic counseling and genetic testing have enabled the precision medicine approach to deliver the "right treatment (or care) to the right patient at the right time." This Special Issue of the Journal of Personalized Medicine aims to highlight the current state of the science in genetic counseling and testing in precision medicine, and discusses some of the latest findings in the field. Studies include those that explore the delivery of polygenic risk score (PRS) information to clients, genetic health professionals' role in health behavior change, ethical considerations for delivering precision medicine, and work from a diverse range of fields including education, decision making and communication

# Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. JPM publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). JPM is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
