Message from the Guest Editor

Throughout the last decade, chronic rhinosinusitis has been recognized as a complex model of inflammation, and the clinical interest in this pathology has increased, as has the attention of the scientific community. With the awareness of the concept of united airways disease and the recent advent of biological therapies, namely target therapies, we have definitively understood the importance of multidisciplinary and personalized diagnostic–therapeutic management. This is mandatory to identify the patient’s immunological profile by assisting in the clinical experience of several specialist figures, and, at the same time, to avoid excesses in the administration of systemic steroids or improperly planned and recurrent surgical interventions.

The purposes of this Special Issue of the *Journal of Personalized Medicine* will be to emphasize the role of the diagnostic process and related clinical research aspects regarding the unmet needs of the patients and the pathology, to understand the current aspects of therapeutic management, and to look at future therapeutic perspectives, including the role of surgery.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
