Message from the Guest Editors

Dear Colleagues,

Breast cancer is one of the most frequent cancers among women and is found to be highly heterogeneous. Importantly, overall survival has improved, mainly due to better medical care, early detection, and important progress of treatments. Although the 5-year overall survival rate of early breast cancer is over 90%, many patients still undergo recurrence, metastasis and drug resistance, even after standard treatment in clinical practice, besides treating breast cancer based on molecular subtypes.

This Special Issue of *Journal of Personalized Medicine* is focused on addressing the latest research on the diagnosis of breast cancer, including prevention, onset, and progression, as well as the potential of personalized therapies at different levels, with special attention to immunotherapy, targeted therapies, chemo and radiation therapy, and surgery, as well as resistance to treatment to improve patient prognosis.

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
