closed (31 March 2022)

Message from the Guest Editor

Pharmacogenetics has the potential to improve the treatment of anxiety and depression. Though some institutions have been implementing pharmacogenetics in the clinical care of patients with anxiety and depression for many years, there is still much more research to be done. The aim of this Special Issue is to provide a comprehensive overview of how pharmacogenetics can influence the efficacy and tolerability of medications used to treat anxiety and depression, the current state of research in this area, and the challenges and opportunities for implementation in clinical care.

Articles may be in the areas of discovery, replication, trial design, position papers, meta-analyses, or a description of your implementation. Articles may be in the form of research article, review paper, or communication.

Special Issue

Editor-in-Chief

Prof. Dr. David Alan Rizzieri

Message from the Editor-in-Chief

Journal of Personalized Medicine (*JPM*; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.
Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (*Medicine (miscellaneous)*)
