### Message from the Guest Editor

Although pharmacogenomic research in psychiatry is not advanced enough to provide a genetic basis for screening and developing new molecules, it offers significant promise for future studies. Based on this background, we launched this Special Issue as a platform to publish studies from researchers employing various research methods and technologies to study psychopharmacological advances in psychiatry. We welcome original papers, reviews, or meta-analyses based on animal and human studies. We will consider papers reporting observational, clinical trials, genetics, imaging, computational, health service research, and ecological and in vitro data.
