Message from the Guest Editor

Biomarkers play a crucial role in the diagnosis, treatment, and management of cancer patients. Nowadays, advances in detection technologies allow greater insight into the molecular mechanisms of a variety of malignancies. Additionally, biomarkers are currently in clinical practice with a prognostic role to identify patients' outcome and a predictive role for response to chemotherapy, targeted agents, and immunotherapy.

This Special Issue aims at reviewing the current state of cancer biomarker development and the prospects for improving cancer care with new technologies and biomarkers.
