### Message from the Guest Editors

Dear Colleagues,

In the last few years, in medical imaging, new perspectives have been developed, especially related to the introduction of artificial intelligence (AI) and radiomics, making radiology a pivotal specialty of modern medicine.

Radiologists will attain better precision and effectiveness with the advent of AI technology, making machine-assisted medical services a valuable and important option for future oncologic medical care.

The purpose of this special issue is to overview the current evidence and future prospects of AI and radiomics algorithms in the screening, diagnosis and treatment of colorectal cancer.
