This Special Issue of the *JPM* will highlight the current state of the art and show# case some of the latest findings in the field of heart diseases, with a main focus on coronary artery disease, microcirculation, as well as all types of heart failure. This involves the evaluation of non-invasive and invasive diagnostic tools, biomarkers, expanded advanced risk factor analysis, risk scoring systems, cardiovascular genetics, gene expression testing, as well as research and debate about the prevention and treatment, especially focused on individualized approaches.

This Special Issue aims to provide researchers with an opportunity to publish both original research and review articles related to recent advances in coronary artery disease and heart failure, with a particular focus on holistic and personalized management as well as novel diagnostic, treatment, and prevention strategies using an interdisciplinary approach involving chemical, biological, physiological, pharmacological, physicochemical, and psychological perspectives.
