submissions:

**closed (15 May 2022)**

### Message from the Guest Editor

Paediatric central nervous system (CNS) tumours encompass a wide variety of diagnoses, from benign to malignant. Any CNS tumour can be associated with significant morbidity, even when low grade and CNS tumours represent the deadliest cancer in paediatric patients. As paediatric malignancies occur early in life, they result in a tremendous loss of quality-adjusted-life-years both from death and from poor quality of life, due to the disabling consequences of treatment in surviving patients. This Special Issue will focus on novel personalized treatment approaches to treat paediatric CNS tumours, which should improve the quality of life for patients with these tumours.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, PMC, Embase, and other databases.

**Journal Rank:** CiteScore - Q1 (Medicine (miscellaneous))
