submissions:

**closed (15 July 2022)**

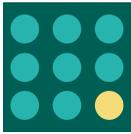

### Message from the Guest Editor

Malignant tumors emerging from the urinary tract make up a significant part of all human neoplastic diseases, with prostate cancer being the second most commonly diagnosed malignancy among men worldwide. Because of their aggressive clinical course and substantial burden for both healthcare systems and for individual patients, every effort should be undertaken to develop more precise diagnostic methods and more effective therapeutic modalities.

In this Special Issue of *JPM*, we present a series of high-quality original articles and meta-analyses concerning various urologic malignancies, illustrating the current developments in both diagnosis and treatment.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, PMC, Embase, and other databases.

**Journal Rank:** CiteScore - Q1 (Medicine (miscellaneous))
