

## Special Issue

# Personalized Medicine for Covid-19 Patients—Clinical Considerations

### Message from the Guest Editors

Coronavirus disease (COVID-19) rapidly spread around the world, causing a huge medical, psychological, and economic burden. This Special Issue aims both to provide an overview of pathophysiological and clinical aspects of COVID-19 disease and address clinical questions concerning personalized management of infected patients. Particular attention will be focused on epidemiology, prevention, public health approach, laboratory diagnosis, therapeutic perspectives, clinical management according to disease severity and site of management, and post-COVID sequelae and rehabilitation. We welcome the submission of reviews, short communications, and original research papers targeting any of these topics.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
