Message from the Guest Editors

Dear Colleagues,

This Special Issue has the potential to make a substantial impact on an important area of research in agribusiness financial risk management. Food and agribusiness accounts for approximately 17% of the United States GDP and a significantly higher percent in most countries. This segment accounts for food security and value added all along the food supply chain, with major implications on the economic stability of a nation. Risk in this segment of the economy has evolved significantly with emerging technologies, a changing policy environment, mergers and acquisitions, and globalization. Risk and financial management are pivotal for the success or failure of firms and the economic development of a nation. The literature on risk and financial management is limited on critical emerging issues in agribusiness. Papers should include but are not limited to agribusiness topics related to advancements in methods to **measure** risks and financial tools to **mitigate** risks.
