### Message from the Guest Editor

Dear Colleagues,

The prediction of stock returns has been a complex problem of frequent research interest in quantitative finance. Complexity is enhanced by the vast number of determinants (predictors) of stock returns and the strength of noise-to-signal ratio of predictors across firms. Financial models of stock returns use a small number of predictors, leaving out vast amounts of financial information that contributes to explaining variations in stock returns. The explosive growth in financial data has allowed analysts, investors, and researchers to use methods such as machine learning (ML) to capture features in high-dimensional data. Capital asset pricing models (CAPM) and machine learning cointegrate well, with CAPM providing a theory-consistent structure to predict asset returns while machine learning captures data features that improve model specification and predictability.

## Message from the Editor-in-Chief

Researchers are most welcome to contribute original research articles or comprehensive review papers for consideration and publication in *Journal of Risk and Financial Management (JRFM)*, an on-line, open access journal. *JRFM* adheres to rigorous peer-review as well as editorial processes, and publishes high quality manuscripts that address theoretical, practical and empirical issues in analysing real life financial data. The goal of *JRFM* is to enable rapid dissemination of high impact research to the scientific community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, EconBiz, EconLit, RePEc, and other databases.

**Journal Rank:** CiteScore - Q1 (Business, Management and Accounting (miscellaneous))
