Message from the Guest Editors

Dear Colleagues,

Greenhouse gas (GHG) fluxes from land use change and disturbances are important outcomes of the anthropogenic impacts on biosphere. Studies of both emissions (a loss of carbon, methane, and nitrous oxide emissions) and removals (increased carbon sinks) are key topics in this Special Issue. We welcome original experimental papers, analytical studies, and reviews covering the areas listed below:

- Carbon accumulation in land converted to forest from agriculture;
- GHG balance of carbon farms and plantations;
- Loss of carbon by dried peatlands;
- Methane emissions following the rewetting of peatlands;
- Postfire GHG emissions due to the decomposition of roots and dead wood;
- GHG emissions after forest/crop disturbances by pests and plant diseases;
- Changes in GHG emissions due to changes in agricultural practices;
- Impact of deforestation and conversion from forest to agricultural land.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Nature and Landscape Conservation)
