submissions:

30 November 2024

Message from the Guest Editors

Dear Colleagues,

Within the context of the mobility of populations and urban development, feasible and accessible urban planning has become increasingly important, as well as for achieving the 2030 Agenda for Sustainable Development Goals (SDGs).

As an emerging information technology science in recent years, Remote Sensing (RS) and Geographic Information System (GIS), through the database platform, information service, and 3D modelling and monitoring, provides more scientific and quantitative analysis methods for urban planning. The Special Issue aims to combine geographic information systems and geospatial data, using technologies such as remote sensing, satellite imagery, and airborne lidar to build geographic information analysis models, and to provide decision-making tools for the players involved in urban planning.

We look forward to receiving your original research articles and reviews.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Nature and Landscape Conservation)
