### Message from the Guest Editors

To make human environments more resilient, new tools for spatial management, spatial and sectorial planning, and design are needed to increase the general quality of life; develop improvement and adaptation strategies for changing environments; and to improve preparedness for uncertainty, response, and recovery.

The aim of this Special Issue is to provide an overview of new approaches to changing environments—conceptualization, tools, technologies, and methodologies—to answer the need of improving the quality of human environments as well as their potential to adapt to environmental changes (slow or fast).

Deadline for manuscript  
submissions:

**closed (5 March 2024)**
