### Message from the Guest Editor

This Special Issue intends to shed a light on the extent, development, and consequences of public, semi-public, and non-profit ownership of agricultural land in market economies in urban and rural settings. What is the significance of these types of agricultural land ownership? How do public and semi-public entities behave on agricultural land markets? How do they contract with farmers? Do public, semi-public, or non-profit owners provide more public goods from agricultural lands? We invite scholars from different social science disciplines to contribute reviews, research articles, case studies, or perspectives to this Special Issue.
