

Special Issue

Challenges in the Framework for Integrated Approaches in Vulnerable Coastal Areas: Case Studies & Innovative Proposals

Message from the Guest Editor

Territorial management and environmental planning have become increasingly interrelated instruments in vulnerable coastal areas. The complexity and dynamism of the processes of anthropization in these territories are phenomena that require new more comprehensive environmental policies and territorial sophisticated approaches. This changing context forces administrations and researchers in this field to develop increasingly complex and demanding frameworks.

However, these actions must be carried out taking into account the increasingly multidisciplinary nature of these phenomena, while highlighting the importance of spatial analysis. This special issue seeks contributions regarding topics such as:

- Sustainability frameworks linked to land use and consumption
- Socio-ecological approaches to solve environmental problems
- Spatial analysis of protected areas policy and management
- Risk analysis derived from human anthropization of natural resources
- Regulatory applications aimed at integrating different knowledge
- Spatial analysis of diffuse pollution phenomena
- Etc.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.
