

Special Issue

Syntax and Discourse at the Crossroads

Message from the Guest Editor

In general, formal approaches to language have considerably contributed to our understanding of the syntax–discourse interface, stimulating fruitful research on questions such as the following: Which discourse-relevant information must syntax include? What is the hierarchical organization of information structure? What is the role that discursive features play in language development and variation? This Special Issue of *Languages* intends to add to these and other topics and thus welcomes research articles and reviews that are theory-based and/or data-driven to discuss the intersection between syntax and discourse. Potential areas of interest include but are not limited to the following:

- The syntactic projection of discursive features—justification and restrictions
- Structural phenomena related to discursive features
- Discourse and the syntax of speech acts
- The role of discursive features in language acquisition
- The role of discursive features in language (macro and micro) variation
- The role of discursive features in language development

About the Journal

Message from the Editorial Board

Languages (ISSN 2226-471X) is now in its eighth year since its inception in 2015. It is an Open Access journal which seeks to stimulate debates on key issues in languages and linguistics. We welcome papers at the cutting edge of different fields, ranging from applied linguistics to descriptive and theoretical linguistics. Submissions may consist of research articles and critical reviews as well as proposals for Special Issues where multi-disciplinary approaches and different perspectives on current issues are explored. We invite you to consider *Languages* as a forum for sharing your work.

Editors-in-Chief
