submissions:

**closed (1 December 2023)**

### Message from the Guest Editors

Dear Colleagues,

Arboviruses from the genera flavivirus and alphavirus are the most important human arboviruses among the major causes of emerging infectious diseases. This Special Issue will delve into the host environment adaptation and modulation, immunity response and antiviral strategy revolving around the arbovirus. Arbovirus has evolved complex mechanisms to antagonize innate immunity response, the dissection of the underlying mechanisms could pave the way for the development of a new antiviral-regimen that can underdo the suppression on innate immunity. The cross activity of arbovirus of the flaviviridae family (genus *Flavivirus*) antigen complicates the design and assessment of arbovirus vaccine, new insights in antibody-dependent enhancement (ADE) phenomenon is crucial for the arbovirus vaccine development. With the rapid development of artificial intelligence-guided design and screening of anti-viral compounds, the field will witness the advent of a variety of novel small anti-arbovirus compounds. The integration of these forefronts in arbovirus has the potential to move the arbovirus research to the next chapter.

## Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
