Message from the Guest Editors

The study of host-pathogen interaction can provide new insights in the understanding of the immune pathogenesis of infectious diseases and immune evasion mechanisms. Studies addressing the issue of immunology of infectious diseases could fill the existing gaps in several aspects of the diagnosis, prognosis and therapeutic approaches of infectious diseases.

Host immune biomarkers able to distinguish infection from colonization would provide useful information to answer to the question whether to treat, give a prophylaxis or just observe patients with the identification of a specific pathogen in a body district.

The Special Issues is now open for submissions. Original research manuscripts or review articles related to various aspects of the immunology of infectious diseases with a translational significance are invited for this Special Issue.
