Hand Soft Tissue Disorders: Mechanisms and Therapeutic Advances

Message from the Guest Editor

Hand soft tissue disorders, such as Dupuytren's disease, trigger finger, and tendon injuries, profoundly affect hand function and quality of life. Advances in genomics, molecular biology, and biomarker discovery have unveiled novel insights into their mechanisms, opening avenues for innovative treatments. This Special Issue, "*Hand Soft Tissue Disorders: Mechanisms and Therapeutic Advances*," invites cutting-edge research on the etiology, pathophysiology, and role of artificial intelligence in managing these conditions. Key topics include precision medicine through genomics, biomarker-based diagnosis and treatment, and novel surgical, pharmacological, and regenerative interventions. We welcome original research and reviews integrating basic science with clinical applications to foster multidisciplinary collaboration and improve patient outcomes.

Guest Editor

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
