

## Special Issue

# Myelin and Oligodendrocyte-Neuron Interactions

### Message from the Guest Editor

The insulating properties of myelin produced by oligodendrocytes in the central nervous system (CNS), together with nodes of Ranvier, small axonal domains highly enriched in voltage-gated Na<sup>+</sup> channels, allow the fast saltatory transmission of action potentials. The myelination profile and node of Ranvier distribution contribute to adjusting the timing of impulse transmission, critical for coincident arrival of synaptic inputs from multiple axons in sensory system. The multifactorial process leading to nodal proteins assembly in the CNS during development remains partially understood, with the recent hypothesis that these mechanisms might differ depending on neuronal sub-populations. In addition, our understanding of cellular interactions and molecular mechanisms underlying myelination is still partial.

## About the Journal

### Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

---

### Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona  
Institute of Science and Technology, 08028 Barcelona, Spain

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
