submissions:

closed (30 April 2024)

Message from the Guest Editor

Dear Colleagues,

Surface processes are applied to alter machine elements to achieve improved properties. This Special Issue of *Machines* focuses on the recent advances in surface processing of metallic components within the scope of the influence of surface processes on mechanical properties, component cosmetics, energy efficiency, machine performance, and environmental concerns. Novel studies within these topics and discussing innovative destructive or non-destructive experimental techniques, such as electron microscopy, focused ion beams, diffraction beams, sectioning, profilometry or nano-indentation, and modeling techniques based on numerical and analytical approaches or principles of artificial intelligence, are welcomed.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2 (Control and Optimization)
