Message from the Guest Editor

Dear Colleagues,

The goal of this Special Issue is to publish the latest advances and prospective achievements in the field of magnetic materials and to present cutting-edge research in the field of new materials and their understanding, through a combination of original research papers and review articles from leading research groups around the world.

Topics to be covered include, but are not limited to, the obtainment and characterization of new magnetic materials, from nano to macro scale, involving new alloys, ceramics, composites, biomaterials, and polymers as well as procedures and technologies for enhancing their structure, properties, magnetism, and functions.

Prof. Dr. Petrica Vizureanu
