Message from the Guest Editor

Dear Colleagues,

The field of magnetic materials is a perennial subject of interest, having undergone a vigorous expansion from classical bulk magnets such as metal oxides to molecular magnetic materials. In recent decades, molecular magnetic materials have attracted enormous attention due to their potential applications, such as information storage, information processing, molecular spintronics, etc.

Until now, concerted researcher efforts involving theoretical calculations, testing methods and synthesis, cornered the market in this field. This Special Issue intends to provide the latest updates and aid in the further development of molecular magnetic materials. We invite the authors to provide original research and review articles involving single-molecule magnets (SMMs), single-chain magnets (SCMs), magnetic MOFs, etc.

Dr. Xiaoqing Zhao
