### Message from the Guest Editors

This issue focuses on new trends in molecular magnetism. We define this term with a broad understanding which includes both traditional single-molecular and/or single-ion magnets and organic and metal–organic ferro-, ferri-, and antiferromagnets with a long-range magnetic order.

The works to be considered are not limited to the short list of topics mentioned above. Original new articles describing the role of structural defects, with unusual results on the effect of moisture on ferromagnetism and sensory properties of molecular magnets, etc. are also of significant interest for this issue.

Prof. Dr. Roman B. Morgunov

Prof. Dr. Andrew Palii
