## Numerical Modeling and Dynamic Analysis of Composite Materials

Guest Editors:

**Dr. Marcos Rodríguez Millán**

Department of Mechanical Engineering, University Carlos III of Madrid, Avda. de la Universidad 30, 28911 Leganés, MD, Spain

**Dr. Anand Pai**

Department of Aeronautical and Automobile Engineering, Manipal Institute of Technology, Manipal Academy of Higher Education, Manipal 576104, India

Deadline for manuscript submissions:

**20 September 2024**

### Message from the Guest Editors

Dear Colleagues,

In modern day applications across various industries, such as aerospace, electronics, medical and military, composite materials have risen to prominence as the preferred choice. These materials offer a diverse range of possibilities as they can be tailored, both in terms of type as well as scale, by altering the matrix material and the reinforcement or fillers. This flexibility, however, presents engineers and designers with numerous challenges in achieving the desired mix of mechanical, tribological, electrical, and corrosion-resistant properties.

To address these complexities, computational tools have emerged as invaluable aids. These tools empower designers to optimize the ideal combination of factors such as fiber volume fraction, filler volume fraction, and particle size and dispersion, while ensuring the desired directional properties of the resulting materials.

The objective of this Special Issue is to unify the advanced numerical and analytical methodologies used to understand the characteristics of diverse composite materials under a single comprehensive framework, offering immense value to the scientific community and the industry at large

## Editor-in-Chief

### Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

## Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
