Message from the Guest Editors

Dear Colleagues,

Nowadays, nanoscience and nanotechnology have become particularly important technologies in dentistry. Indeed, following a minimally invasive approach, new biomaterials with optimal chemo-mechanical characteristics and innovative digital techniques enable simplification and improvement of the quality of procedures, resulting in predictable and satisfactory results for both the dentist and the patient.

Therefore, this Special Issue will focus on new biomaterials and digital techniques in restorative dentistry and endodontics and their capability to improve dental health. We welcome submissions of original research articles, reviews, and new dental techniques.

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
