Deadline for manuscript  
submissions:  
**closed (10 October 2022)**

### Message from the Guest Editor

Dental implants are widely used to restore a single missing tooth or even completely edentulous jaws. In these systems, biological and mechanical complications may exist. Being exposed to variable masticatory loads, fatigue failure is a major mechanical concern, and several materials, manufacturing processes, geometries and dimensions, assembly conditions, and surface treatments, among other influence factors, have been proposed and studied to improve the fatigue behavior of dental implants. ISO 14801 Standard was further developed to standardize fatigue testing conditions for dental implants in order to allow for a direct comparison of the performance of different design alternatives. In this sense, experimental tests are the cornerstone in this research field, sometimes combined with numerical and analytical models. Thus, in spite of the great effort made so far, fatigue design of dental implants is still a hot topic where a lot of work remains to be done to minimize this problem and guarantee long-term clinical success in dental implants.

## Editor-in-Chief

### Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

## Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
